Security and Compliance

Securing today's networks can be a daunting task. Most organizations struggle to find the proper balance between information availability, employee productivity and data protection.

Our Security and Compliance engineers are experts in the latest threats and the methods to counter them. We begin by learning how your business operates, the security concerns it faces, and the regulations that govern it. By completing a comprehensive vulnerability assessment, we can identify weaknesses, plan appropriate remediation and last – select, install and maintain the right security platforms and processes to protect your information assets.

Our expertise:

- :: Network security auditing
- :: Network security compliance consulting
- :: Network security incident response, remediation and reporting
- :: Enterprise data protection and data continuity

Our approach:

- :: Risk assessment and consulting
- :: Needs identification, strategic planning and budgeting
- :: Solution design and engineering
- :: Procurement, project management, implementation and training
- :: Security policy and procedures development
